QUANTUM 3.0

THE CATALOG

One level. Every color. One part number.

Pre-release edition v111526

MADE IN THE USA.

QUANTUM 3.0

The third generation of Quantum.

Quantum 49 on a Chevy Tahoe with today's optic: a concept image, finished from its engineering CAD render.

ONE LEVEL. EVERY COLOR. ONE PART NUMBER.

Quantum started with five levels. Then three. Now there is one. Every Quantum 3.0 light ships with red, blue, amber, white and green on, programmed and ready to work out of the box. One part number per product. One price, set where Quantum's Tri level was.

1.0

Four colors.
Five levels.

2.0

Green joins. Five colors.
The dual transistor. Double the power.
Three levels: Dual, Tri, Full.

3.0

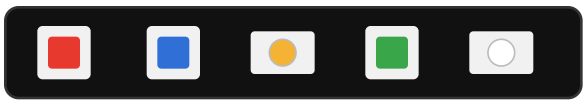

Ceramic LEDs at 1 A. A new linear optic.
Bluetooth. One level.

WHAT'S NEW IN 3.0

Four changes. Same housings. Same mounts.

BRIGHTER

Red, blue and green move to Cree ceramic LEDs, driven at 1 A by new switching regulators. Amber and white stay on proven mid-power LEDs. The goal: the brightest warning light in the industry.*

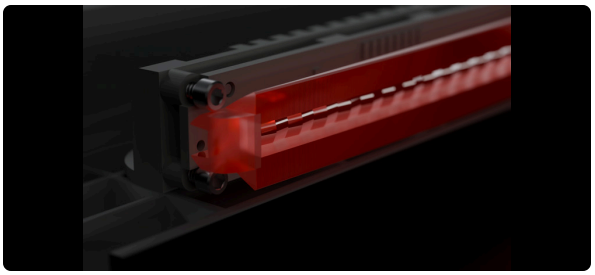

CERAMIC LED, 1 A
MID-POWER LED

One LED module, drawn: which colors move to ceramic LEDs.

A NEW LINEAR OPTIC

The one part you will see change: satin light bands, a fine frosted frame around each LED module, a faceted crystal line down the centre lens, and a lit, rounded shoulder at each end that closes the dark joint.

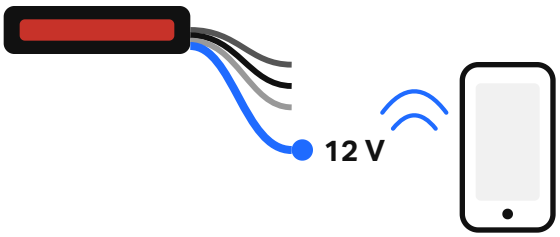

The Quantum 3.0 optic, one LED module (concept render).

THE OPTIC, PAGE 6

BLUETOOTH, WITH EVE

Put 12 V on the blue wire and the light is ready to pair. Program it from a phone, tablet or computer, or ask Eve, Feniex's AI, to help.

All products are shown at one scale, by each product's longest dimension; the Light Module Series and the Quantum Module at twice that scale. Photos show current Quantum hardware: Quantum 3.0 keeps the same housings and mounts. The new optic is on page 6. † Mirror Mount: vehicle-specific housing, size varies by vehicle; not to scale.

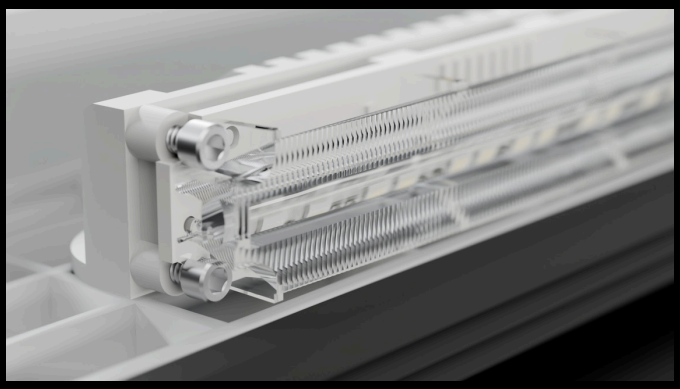

THE NEW LINEAR OPTIC

The one part you will see change.

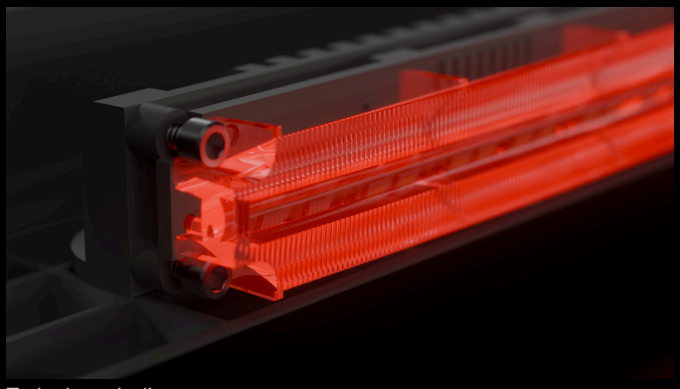

1 The bar, with the Quantum 3.0 optic (concept render). **2** One LED module. **3** An LED module's end, close up.

TODAY'S OPTIC

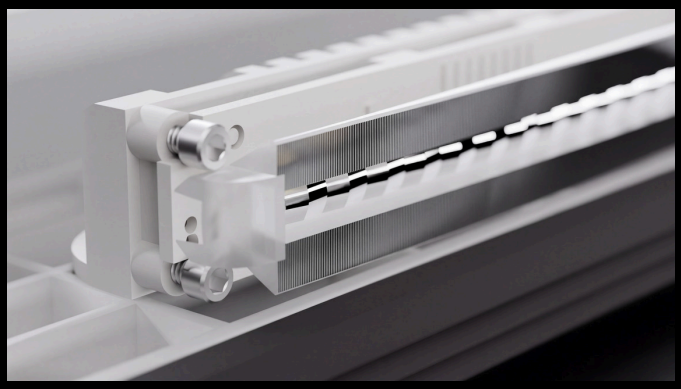

Today's optic, unlit.

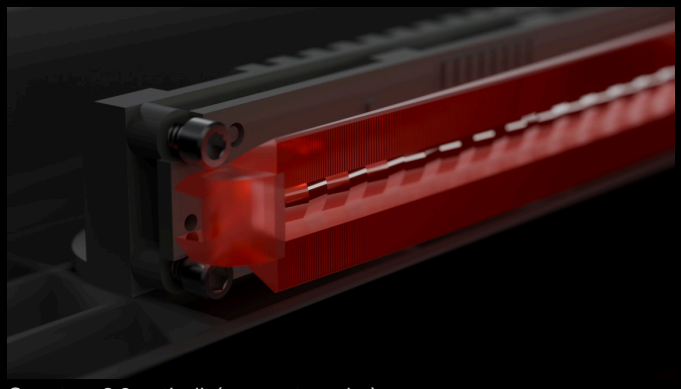

Today's optic, lit.

QUANTUM 3.0 OPTIC **CONCEPT RENDER**

Quantum 3.0 optic, unlit (concept render).

Quantum 3.0 optic, lit (concept render).

It keeps today's beam-shaping surfaces and changes what the eye meets: satin light bands in place of today's fine ribs, a fine frosted frame around each LED module, a faceted crystal line down the centre lens, and a lit, frosted, lightly rounded shoulder at each end that closes the dark joint between LED modules.

Renders: Blender, from the Quantum 49's engineering CAD, the same modules with each optic (the new optic, unlit, finished from its render).

CONTROL

Three ways to control it. The customer chooses.

1. MODE WIRES

Programmed inputs, from a switch or a controller.

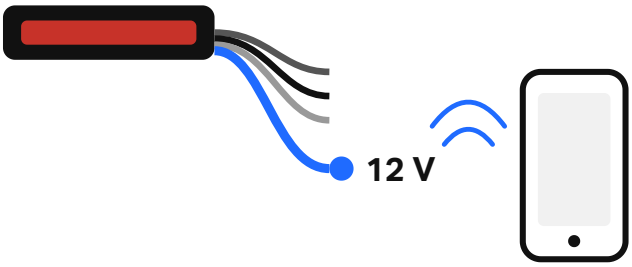

2. SERIAL

Two serial wires.

3. BLUETOOTH

A phone, a tablet or a computer.

PAIR IN THREE STEPS

The blue wire

1. Put 12 V on the blue wire.
2. Pair your phone, tablet or computer.
3. Program it yourself, or ask Eve.

The blue wire is on light sticks and interior lightbars (10X), full-size lightbars (30X) and the Quantum Module.

QUANTUM MODULE

Controller. Formerly Q Link. It runs Light Module Series lights over serial, and it gets the same Bluetooth chip and blue wire as the lightbars. Pictured with today's Q Link label.
